Prewired Limit Switches

Double Insulation ⧈ - Plastic Casing IP67 or Metal Casing IP67

Applications

Easy to use, electromechanical limit switches offer specific qualities:

- Visible operation.
- Able to switch strong currents (5 A conventional thermal current).
- Electrically separated contacts (Zb shape).
- Contact blocks with positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Precise operating points (consistency).
- Immune to electromagnetic disturbances.

They are exceptional detection devices thanks to these characteristics:

- Presence/absence.
- Positioning and travel limit.
- Objects passing/counting.

Description

LS20P ... LS26P limit switches, made of fibre-glass reinforced UL-V0 thermoplastic material, sealed with epoxy resin at the base on the body, offer double insulation ⧈ and a degree of protection IP67.

LS20M ... LS26M limit switches, made of zinc alloy (zamack), sealed with epoxy resin at the base on the body, offer a degree of protection IP67.

The casings come in 2 dimensions: **LS20 ... LS21**, 30 mm width, **LS25 ... LS26**, 35 mm width.

A variety of operating heads:
- Plain plunger
- Roller plunger
- Roller lever, adjustable or not, etc.

Assembled using 2 x ø3 screws for LS20P...LS26P
Assembled using 2 x M3 screws for LS20M...LS26M

Casing:
- 30 mm or 35 mm width

Contact blocks:
- Contact configuration: 1 N.O. + 1 N.C.
- Positive opening operation ⊖
- Snap action or slow action
- Zb shape: the 2 contacts are electrically separated

Mounting the casing:
- 2 x M4 screws on the top part

Electrical connection:
- Cable output left/right or cable output bottom:
  for LS20P...LS26P
  - cable IEC 20/22 II PVC 4 x 0.75 mm²
  - cable UL 62 PVC 4 x AWG 18

  for LS20M...LS26M
  - cable IEC 20/22 II PVC 5 x 0.75 mm²
  - cable UL 62 PVC 5 x AWG 18
- Standard length: 1 m (other lenghts on request)
- Other outputs (on request):
  - connector M12 or 7/8" NPT
  - cable with end connector

- Compounding with epoxy resin for IP67 protection degree

LS3..P.., LS4..P.. and LS7..P.. Limit Switches

Double Insulation ⧈ - Plastic Casing IP65

Applications

Easy to use, electromechanical limit switches offer specific qualities:

- Visible operation.
- Able to switch strong currents (10 A conventional thermal current).
- Electrically separated contacts.
- Contact blocks with positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Precise operating points (consistency).
- Immune to electromagnetic disturbances.

They are exceptional detection devices thanks to these characteristics:

- Presence/absence.
- Positioning and travel limit.
- Objects passing/counting.

Description

LS3..P..., **LS4..P...** and **LS7..P...**, limit switches, which are made of fibre-glass reinforced UL-V0 thermoplastic material, offer double insulation ⧈ and a degree of protection IP65.

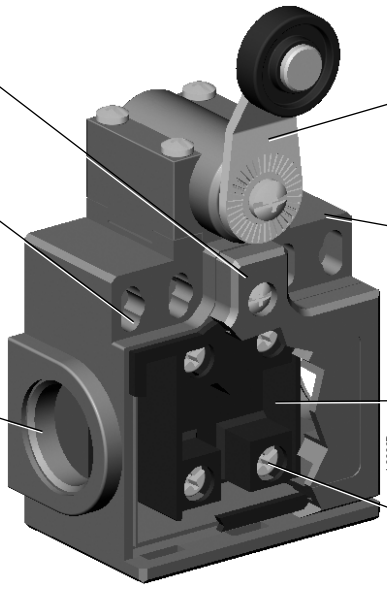
The casings come in 3 dimensions: **LS3..P...** 30 mm width, **LS4..P...** 40 mm width, **LS7..P...** 60 mm width.

Cover:
- Closed using 1 x ø3 screw for 30 & 60 mm width
- Self clipping closure for 40 mm width

One piece sealing gasket to ensure tightness

Mounting the casing:
- 2 x M4 screws for 30 mm width
- 2 or 4 x M5 screws for 40 mm width
- 2 or 4 x M4 screws for 60 mm width

Electrical connection:
- 1 (LS30P), 1 (LS40P) or 2 (LS70P) cable inlets for Pg 13.5 cable gland
- 1 (LS31P) or 2 (LS71P) cable inlets for Pg 11 cable gland
- 1 (LS32P) or 2 (LS72P) cable inlets for ISO 16 cable gland
- 1 (LS33P), 1 (LS43P) or 2 (LS73P) cable inlets for ISO 20 cable gland
- 1 (LS35P) cable inlet by 1/2" NPT plastic adaptor
- 1 (LS45P) cable inlet for 1/2" NPT cable gland
- 1 (LS75P) cable inlet by 1/2" NPT plastic adaptor + 1 cable inlet Pg11 for additional 1/2" NPT plastic adaptor (on request)
- Suitable for conduit connection only with use of adaptor sleeve optionally provided by manufacturer. (on request)



A variety of operating heads:
- Plain plunger
- Roller plunger
- Roller lever, adjustable or not, etc.

Assembled using 4 x ø3 screws for 30 & 60 mm width
Assembled using 4 x ø4 screws for 40 mm width

Casing:
- 30 mm width with standardized dimensions according to EN 50047
- 40 mm width with standardized dimensions according to EN 50041
- 60 mm width compatible with EN 50047 (Fixing)

Block of 2 contacts:
- Contact configuration: 1 N.O. + 1 N.C., 2 N.O., 2 N.C.
- Positive opening operation ⊖
- Snap action or slow action
- The 2 contacts are electrically separated

Connecting terminals:
- M3.5 (+,–) pozidriv 2 screw (Screw head with captive cable clamp)
- Markings conform with IEC 60947-1, IEC 60947-5-1, EN 50005 and EN 50013 standards

Type

Example: L S | 7 2 | P | 4 1 | B 1 1

L S

Limit **S**witch ..... **LS**

Casing width: **3**0 mm **3**
1 cable inlet for Pg 13.5 cable gland **0**
1 cable inlet for Pg 11 cable gland **1**
1 cable inlet M16 x 1.5 for ISO 16 cable gland **2**
1 cable inlet M20 x 1.5 for ISO 20 cable gland **3**
1 cable inlet by 1/2" NPT plastic adaptor delivered not mounted **5**

Casing width: **4**0 mm **4**
1 cable inlet for Pg 13.5 cable gland **0**
1 cable inlet M20 x 1.5 for ISO 20 cable gland **3**
1 cable inlet for 1/2" NPT cable gland **5**

Casing width: **6**0 mm **7**
2 cable inlets for Pg 13.5 cable gland **0**
2 cable inlets for Pg 11 cable gland **1**
2 cable inlets M16 x 1.5 for ISO 16 cable gland **2**
2 cable inlets M20 x 1.5 for ISO 20 cable gland **3**
1 cable inlet by 1/2" NPT plastic adaptor + 1 cable inlet Pg 11 for additional 1/2" NPT plastic adaptor (on request) **5**

P ..... **P**lastic casing

Operating heads: (see panorama)
10 ... **98** ..... Codes

Snap action:
B ..... Zb Snap (except for 2 N.O. contacts)

Dependent (slow) action:
L ..... Slow / Simultaneous
D ..... Zb Non-overlapping late make
C ..... Zb Overlapping early make

Contact types:
11 ..... **1** N.O. + **1** N.C. contacts
20 ..... **2** N.O. contacts
02 ..... **2** N.C. contacts

LS3..M.., LS4..M.. and LS7..M.. Limit Switches

Metal Casing IP66

Applications

Easy to use, electromechanical limit switches offer specific qualities:

- Visible operation.
- Able to switch strong currents (10 A conventional thermal current).
- Electrically separated contacts.
- Contact blocks with positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Precise operating points (consistency).
- Immune to electromagnetic disturbances.

They are exceptional detection devices thanks to these characteristics:

- Presence/absence.
- Positioning and travel limit.
- Objects passing/counting.

Description

Limit switches, **LS3..M..** and **LS7..M..**, which are made of zinc alloy (zamack), have a degree of protection IP66.

Limit switches, **LS4..M..**, which are made of aluminium alloy, have a degree of protection IP66.

The casings come in 3 dimensions: **LS3..M...** 30 mm width, **LS4..M...** 40 mm width, **LS7..M...** 60 mm width.

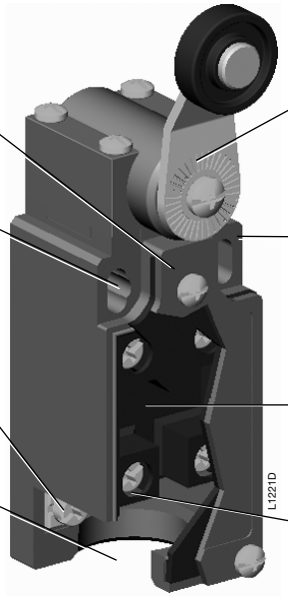
Cover:
- Closed using 3 x M3 screws for 30 mm width
- Closed using 4 x M3 screws for 60 mm width
- Closed using 2 x M4 screws for 40 mm width

One piece sealing gasket to ensure tightness

Mounting the casing:
- 2 x M4 screws for 30 mm width
- 2 or 4 x M5 screws for 40 mm width
- 2 or 4 x M4 screws for 60 mm width

Terminal for protective conductor placed near the cable inlet and marked: ⏚
- M3.5 (+,–) pozidriv 2 screw (Screw head with captive cable clamp)

Electrical connection:
- 1 (LS30M), 1 (LS40M) or 3 (LS70M) cable inlets for Pg 13.5 cable gland
- 1 (LS31M) or 3 (LS71M) cable inlets for Pg 11 cable gland
- 1 (LS32M) or 3 (LS72M) cable inlets for ISO 16 cable gland
- 1 (LS33M), 1 (LS43M) or 3 (LS73M) cable inlets for ISO 20 cable gland
- 1 (LS35M), 1 (LS45M) or 3 (LS75M) cable inlets for 1/2 NPT cable gland
- Suitable for conduit connection only with use of adaptor sleeve optionally provided by manufacturer. (on request)



A variety of operating heads:
- Plain plunger
- Roller plunger
- Roller lever, adjustable or not, etc.

Assembled using 4 x M3 screws for 30 & 60 mm width
Assembled using 4 x M4 screws for 40 mm width

Casing:
- 30 mm width with standardized dimensions according to EN 50047.
- 40 mm width with standardized dimensions according to EN 50041.
- 60 mm width compatible with EN 50047 (Fixing).

Block of 2 contacts:
- Contact configuration: 1 N.O. + 1 N.C. or 2 N.O. or 2 N.C.
- Positive opening operation ⊖
- Snap action or slow action
- The 2 contacts are electrically separated

Connecting terminals:
- M3.5 (+,–) pozidriv 2 screw (Screw head with captive cable clamp)
- Markings conform with IEC 60947-1, IEC 60947-5-1, EN 50005 and EN 50013 standards

Type

Example: L S | 3 2 | M | 4 1 | B 1 1

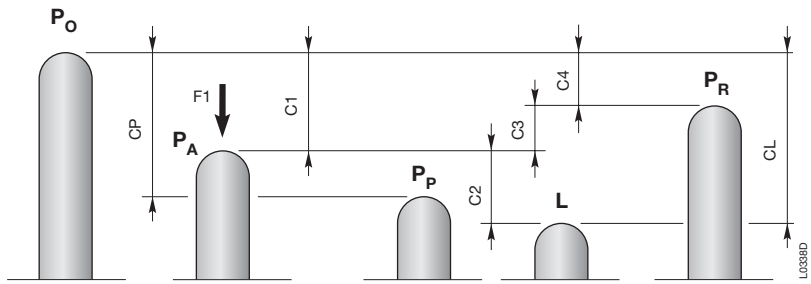
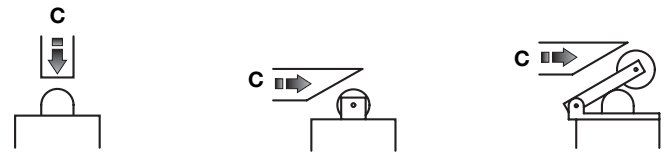
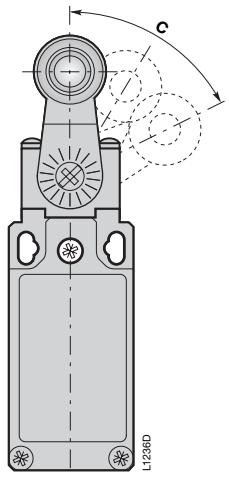
Limit Switches Plastic or Metal Casing

Travel and Operation Diagrams





C: Travel in millimetres



C: Travel in degrees

P_O Free position:
position of the switch actuator when no external force is exerted on it.

P_A Operating position:
position of the switch actuator, under the effect of force **F1**, when the contacts leave their initial free position.

P_P Positive opening position:
position of the switch actuator from which positive opening is ensured.

L Max. travel position:
maximum acceptable travel position of the switch actuator under the effect of a force **F1**.

P_R Release position:
position of the switch actuator when the contacts return to their initial free position.

C_1 Pre-travel (average travel):
distance between the free position P_O and the operating position P_A.

C_P Positive opening travel:
minimum travel of the switch actuator, from the free position, to ensure positive opening operation of the normally closed contact (N.C.).

C_2 Over-travel (average travel):
distance between the operating position P_A and the max. travel position **L**.

C_L Max. travel (maximum travel):
distance between the free position P_O and the max. travel position **L**.

C_3 Differential travel (C1-C4) (average travel):
travel difference of the switch actuator between the operating position P_A and the release position P_R.

C_4 Release travel (average travel):
distance between the release position P_R and the free position P_O.

Diagram for snap action contacts:

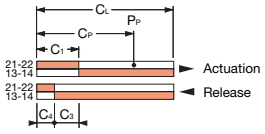


Diagram for non-overlapping slow action contacts:

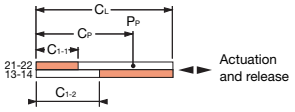

Contacts position

Note: for slow action contacts, $C_3 = 0$, C_{1-1} = pre-travel of contact 21-22, C_{1-2} = pre-travel of contact 13-14.

Safety Limit Switches with Small Latch (Key)

Double Insulation - Plastic Casing IP65 - 30 and 40 mm Width
Metal Casing IP66 - 30 and 40 mm Width

Applications

Easy to use, the limit switches with small latch (key) offer specific qualities:

- Visible operation.
- Capability for strong current switching (conventional thermal current 10 A).
- Opening guaranteed of the "N.C." contact(s) when the small latch is withdrawn from the limit switch.
- Contact blocks with dependent action and positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Electrically separated contacts.
- Precision on operation positions (consistency).
- Immunity to electromagnetic disturbances.

These specific features make the limit switches ideal for monitoring and protection of industrial machines without inertia in which down-time is less than access time to the dangerous area. Use on sliding or pivoting protectors (covers, cases, doors, grids, etc.).

- They contribute to protection of operators working on dangerous machines, by opening the control circuit. Withdrawal of the small latch (key) by opening the mobile protector causes immediate stopping of the machine drive.
- Associated with other standard limit switches and safety switching devices, they produce automatic control circuits meeting standard EN 954-1.
- They comply with the requirements of European Directives (Low Voltage, Machines and Electromagnetic Compatibility) and are conform to European an international standards.

Description

LS3..P..-S (30 mm width) and **LS4..P..-S** (40 mm width) safety limit switches with key, which are made of fibre-glass reinforced UL-V0 thermo-plastic material, offer double insulation ⧈ and a degree of protection IP65.

LS3..M..-S (30 mm width) safety limit switches with key, which are made of zinc alloy (zamak), have a degree of protection IP66.

LS4..M..-S (40 mm width) safety limit switches with key, which are made of aluminium alloy, have a degree of protection IP66.

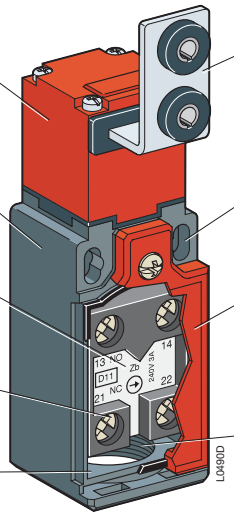
2 operating head options:
- Adjustable every 90° assembled using 4 x ø 3 screws (L3..P), 4 x ø 4 screws (L4..P), 4 x M3 screws (L3..M) and 4 x M4 screws (L4..M)
- Pivoting from 0° to 360° with 1 x M3 screw (LS3..P81 or LS3..M81 only)

Casing:
- 30 mm width with standardized dimensions according to EN 50047
- 40 mm width with standardized dimensions according to EN 50041

Block of 2 or 3 contacts
- Contact configuration: 1 N.O. + 1 N.C., 2 N.C., 1 N.O. + 2 N.C. or 3 N.C. (LS4..P/M only)
- Positive opening operation ⊖
- Snap action (only for blocks of 2 contacts)
- Slow action
- The contacts are electricaly separated

Connecting terminals
- M3.5 (+,-) posidriv 2 screw (Screw head with captive cable clamp)
- Marking conform to IEC 60947-1, IEC 60947-5-1, EN 50005 and EN 50013 standards

Terminal for protective conductor placed near the cable inlet and marked: ⏚ (LS3..M & LS4..M only)
- M3.5 (+,–) pozidriv 2 screw (Screw head with captive cable clamp)



7 small latch (key) options (for LS3..P or LS3..M) and 5 small latch (key) options (for LS4..P or LS4..M) to be ordered separately:
- Right angle key (13 or 22 mm fixing)
- Straight key (13 or 22 mm fixing)
- Straight key or right angle key with shock absorber
- Adjustable right angle key

Mounting the casing:
- 2 x M4 screws in top part for 30 mm width
- 2 or 4 x M5 screws for 40 mm width

Cover
- Closed using 1 x ø 3 screw for LS3..P..-S
- Closed using 3 x M3 screws for LS3..M..-S
- Self clipping for LS4..P..-S
- Closed using 2 x M4 screws for LS4..M..-S

One piece sealing gasket to ensure tightness

Electrical connection:
- 1 (LS30P/M & LS40P/M) cable inlet for Pg 13.5 cable gland
- 1 (LS31P/M) cable inlet for Pg 11 cable gland
- 1 (LS32P/M) cable inlet for ISO 16 cable gland
- 1 (LS33P/M & LS43P/M) cable inlet for ISO 20 cable gland
- 1 (LS35P) cable inlet by 1/2" NPT plastic adaptor
- 1 (LS35M & LS45P/M) cable inlet for 1/2" NPT cable gland

Suitable for conduit connection only with use of adaptor sleeve optionally provided by manufacturer (on request)

Safety Limit Switches with Axis or Lever

Double Insulation - Plastic Casing IP65 - 30 mm Width
Metal Casing IP66 - 30 mm Width

Applications

Easy to use, the limit switches with rotative axis or lever offer specific qualities:

- Visible operation.
- Capability for strong current switching (conventional thermal current 10 A).
- Opening of the "N.C." contact(s) for a very small rotation angle: 7°.
- Contact blocks with dependent action and positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Electrically separated contacts.
- Precision on operating positions (consistency).
- Immunity to electromagnetic disturbances.

These specific features make the limit switches ideal for monitoring and protection of light industrial machines without inertia equipped with angular movement protectors (doors, hinged grids, rotative covers or cases, etc.). Detection by the rotative axis or by means of a lever.

- Opening of the mobile protector guarantees operator protection by immediately stopping the machine drive.
- These switches are suitable for conformity of the existing installed machine base, as they can be mounted on protection devices already installed.
- Associated with other standard limit switches and safety switching devices, they produce automatic control circuits meeting standard EN 954-1.
- They comply with the requirements of European Directives (Low Voltage, Machines and Electromagnetic Compatibility) and are conform to European and international standards.

Description

LS3..P75..-S to **LS3..P77..-S** safety limit switches, which made of fibre-glass reinforced UL-V0 thermoplastic material, offer double insulation ⧈ and a degree of protection IP65.

LS3..M75..-S to **LS3..M77..-S** safety limit switches, which made of zinc alloy (zamack), have a degree of protection IP66.

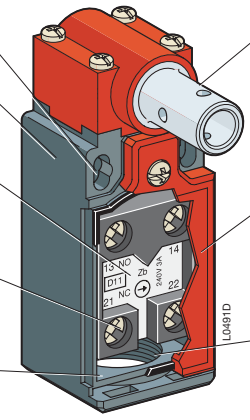
Casing fixing (Plastic or Metal)
- 2 x M4 screws in the top part

Casing (Plastic or Metal)
- 30 mm wide with standardised dimensions corresponding to EN 50047

Block of 2 contacts
- Contact configuration: 1 N.O. + 1 N.C. or 2 N.C.
- Positive opening operation ⊖
- Slow action or snap action
- The 2 contacts are electrically separated

Connecting terminals
- M3.5 (+,-) posidriv 2 screw
(Screw head with captive cable clamp)
- Marking conform to IEC 60947-1, IEC 60947-5-1, EN 50005 and EN 50013 standards

Terminal for protective conductor placed near the cable inlet and marked: ⏚ (LS3..M only)
- M3.5 (+,–) pozidriv 2 screw
(Screw head with captive cable clamp)



3 operating head options:
- Galvanised steel rotative axis
- Stainless steel rotative axis
- Galvanised steel flush mounting right angle lever

Assembly by 4 x ø 3 screws for LS3..P..-S
Assembly by 4 x M3 screws for LS3..M..-S

Cover
- Closed using 1 x ø 3 screw for LS3..P..-S
- Closed using 3 x M3 screws for LS3..M..-S

One piece sealing gasket to ensure tightness.

Electrical connection:
- 1 (LS30P/M) cable inlet for Pg 13.5 cable gland
- 1 (LS31P/M) cable inlet for Pg 11 cable gland
- 1 (LS32P/M) cable inlet for ISO 16 cable gland
- 1 (LS33P/M) cable inlet for ISO 20 cable gland
- 1 (LS35P) cable inlet by 1/2" NPT plastic adaptor
- 1 (LS35M) cable inlet for 1/2" NPT cable gland

Suitable for conduit connection only with use of adaptor sleeve optionally provided by manufacturer (on request)

Type

Safety Limit Switches with Pulling Cable

Double Insulation - Plastic Casing IP65 - 30 mm Width
Metal Casing IP66 - 30, 40 and 60 mm Width

Applications

Easy to use, the safety limit switches with pulling cable for emergency stop with latching and manual rest offer specific qualities:

- Visible operation.
- Capability for strong current switching (conventional thermal current 10 A)
- Contact blocks with dependent action and positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖)
- Electrically separated contacts.
- Precision on operation positions (consistency).
- Immunity to electromagnetic disturbances.

These specific features make the limit switches ideal for monitoring and protection in the technical premises (testing-station, painting lines,...) and on the industrial machines (presses, conveyor belts, transfer machines,...) being able to present risks or dangerous phenomena under operation.
In any point of his working area, the operator must be able to easily actuate (to pull) the cable to order the stop of the machine or the work in progress.

- Associated with safety switching devices, they produce automatic control circuits meeting standard EN 954-1.
- They comply with the requirements of European Directives (Low Voltage, Machines and Electromagnetic Compatibility) and are conform to European an international standards.

Description

Safety limit switches with pulling cable for emergency stop with Latching and manual reset :

LS3..P..-SCR (30 mm width), which are made of fibre-glass reinforced UL-V0 thermoplastic material, offer double insulation ⧈ and a degree of protection IP65.

LS3..M..-SCR (30 mm width), which are made of zinc alloy (zamak), have a degree of protection IP66.

LS4..M..-SCR (40 mm width) and **LS6..M..-SCR** (60 mm width), which are made of aluminium alloy, have a degree of protection IP66.

Blue manual reset button

Casing:
- 30 mm width with standardized dimensions according to EN 50047
- 40 mm width with standardized dimensions according to EN 50041
- 60 mm width

Block of 2 or 3 contacts
- Contact configuration: 1 N.O. + 1 N.C., 2 N.C., 1 N.O. + 2 N.C. or 3 N.C. (LS4..M..-SCR & LS6..M..-SCR only)
- Positive opening operation ⊖
- Snap action (only for blocks of 2 contacts)
- Slow action
- The contacts are electrically separated

Connecting terminals
- M3.5 (+,-) posidriv 2 screw (Screw head with captive cable clamp)
- Marking conform to IEC 60947-1, IEC 60947-5-1, EN 50005 and EN 50013 standards

Terminal for protective conductor placed near the cable inlet and marked: ⏚ (LS3..M..-SCR, LS4..M..-SCR & LS6..M..-SCR only)
- M3.5 (+,–) pozidriv 2 screws (Screw head with captive cable clamp)

Operating head:
- Assembling using 4 x M3 screws for LS3..M
- Assembling using 4 x ø 3 screws for LS3..P
- Assembling using 4 x M4 screws for 40 & 60 mm width

Mounting the casing:
- 2 x M4 screws in top part for 30 mm width
- 2 or 4 x M5 screws for 40 mm width
- 2 x M5 screws in top part for 60 mm width

Cover
- Closed using 1 x ø 3 screw for LS3..P..-SCR
- Closed using 3 x M3 screws for LS3..M..-SCR
- Closed using 2 x M4 screws for LS4..M..-SCR
- Closed using 4 x M4 screws for LS6..M..-SCR

One piece sealing gasket to ensure tightness

Electrical connection:
- * (LS30P/M, LS40M & LS60M) cable inlet for Pg 13.5 cable gland
- 1 (LS31P/M) cable inlet for Pg 11 cable gland
- 1 (LS32P/M) cable inlet for ISO 16 cable gland
- * (LS33P/M, LS43M & LS63M) cable inlet for ISO 20 cable gland
- 1 (LS35P) cable inlet by 1/2" NPT plastic adaptor
- * (LS35M, LS45M & LS65M) cable inlet for 1/2" NPT cable gland

* 1 cable inlet (LS3.P/M & LS4.M) & 3 cable inlets (LS6.M)

Suitable for conduit connection only with use of adaptor sleeve optionally provided by manufacturer (on request)

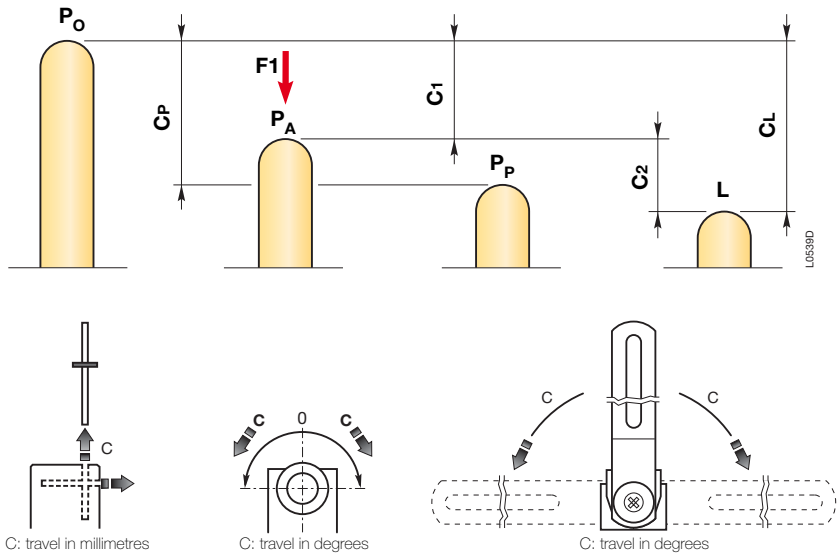
Safety Limit Switches

Travel and Operating diagrams



P_O Free position:
position of the switch actuator when no external force is exerted on it.

P_A Operating position:
position of the switch actuator, under the effect of force **F1,** when the contacts leave their initial free position.

P_P Positive opening position:
position of the switch actuator from which positive opening is ensured.

L Max. travel position:
maximum acceptable travel position of the switch actuator under the effect of a force **F1**.

C_1 Pre-travel (average travel):
distance between the free position **P_O** and the operating position **P_A.**

C_P Positive opening travel:
minimum travel of the switch actuator, from the free position, to ensure positive opening operation of the normally closed contact (N.C.).

C_2 Over-travel (average travel):
distance between the operating position **P_A** and the max. travel position **L**.

C_L Max. travel (maximum travel):
distance between the free position **P_O** and the max. travel position **L**.

Note: **C_{1-1}** = pre-travel of contact 21-22,
C_{1-2} = pre-travel of contact 13-14.

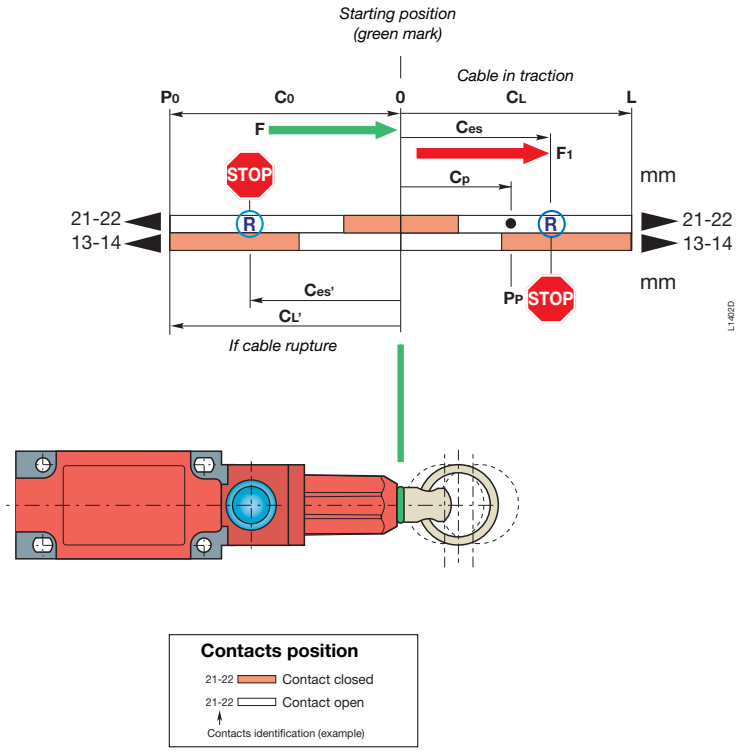
Contacts position

Safety Limit Switches with Pulling Cable for Emergency Stop with Latching and Manual Reset

Travel and Operating diagrams and Installation



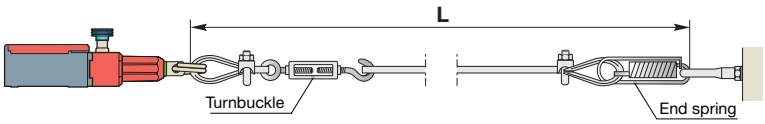
Po	Free position: position of the switch actuator (ring plunger) when no external force exerted on it.
Pp	Positive opening position: position of switch actuator (ring plunger) from which positive opening is ensured.
0	Starting position (green mark): the safety system is on by pulling the blue reset button.
L	Max. travel position: maximum acceptable travel position of the switch actuator (ring plunger).
Co	Minimum travel for arming the safety system and to obtain the starting position under the effect of a force **F**.
Cp	Positive opening travel: minimum travel of the switch actuator (ring plunger), from the starting position, to ensure the positive opening operation of the normally closed contact (**N.C.**).
Ces, Ces'	Emergency Stop and Latching travel: minimum travel to obtain the emergency stop and the mechanical latching of the safety system under the effect of a force **F1**.
CL	Max. travel (maximum travel): distance between the starting position **0** and the max. travel position **L**.
CL'	Distance between the starting position **0** and the free position **Po** if the cable breaks.

Installation

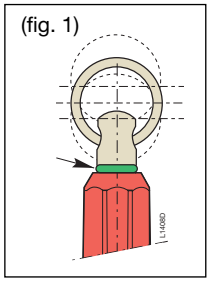
To obtain the right operation of the apparatus, please follow carefully below instructions:

1. If necessary, according the Limit Switch position turn the head by unscrewing the 4 fixing screws in oder that the blue reset button become accessible. When the head is well place, re-screw the 4 screws with a tightening torque of 0.8 Nm.
2. In order to have the cable correctly guided, fix tightly the apparatus and the cable support on rigid elements. Insert on the side of the Limit Switch a turnbuckle, and in the other side of the cable an extremity spring. Put the cable in tension by using the turnbuckle till the green mark appear on the metal plunger at the extremity of the red head (fig. 1).
3. Pull the blue reset button to arm the safety system and close the safety contacts.
4. The inside contacts of the Limit Switch will always change of position each time the cable will be operated (by pulling) as shown on the above diagram.
5. Check that the apparatus operate correctly before to switch on the machine by following the below test procedure :
   a) pull slowly the cable, the blue reset button doesn't change of position but the **N.C.** contact open and operate the "normal" stop of the machine.
   b) Pull the cable with an **F1** force, the blue reset button change of position and operate the emergency stop of the machine with latching of the safety system.
   c) In order to switch on again the device, please come back to point n° 2 and repeat the operation (if necessary).
6. The use of those apparatus involve the respect of following standard: EN 1088, EN 292, EN 954-1

LS3..M98..-SCR and **LS3..P98-SCR** series: **L** = 6 m maximum
LS4..M98..-SCR and **LS6..M98-SCR** series: **L** = 16 m maximum



(fig. 1)



LS3..M98..-SCR and **LS3..P98-SCR** series: **L** = 15 m maximum **G** = 3 m maximum
LS4..M98..-SCR and **LS6..M98-SCR** series: **L** = 25 m maximum **G** = 3÷5 m maximum

Limit Switches with Latch and Manual Reset

Plastic Casing IP65 □ and Metal Casing IP66 - 30 mm Width

Applications

Easy to use, the limit switches for safety applications with latch and manual reset offer specific qualities:

- Visible operation (fault memorisation).
- Capability for strong current switching (conventional thermal current 10 A).
- Contact blocks with positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Electrically separated contacts.
- Precision on operating positions (consistency).
- Immunity to electromagnetic disturbances.

These specific features make the limit switches ideal for detection and monitoring of faults in hoisting machines, electric lifts, freight elevators, escalators, conveyor belts, etc.

Limit switches with latch and manual reset comply with the requirements of standard EN 81-1: safety rules for the construction and installations of electric lifts. In this application they detect or monitor: cabin overtravel, cabin speed by means of a speed limiting device, energisation of the parachute block on detection of excessive speed with respect to the set-point value, etc.

They comply with the requirements of European Directives (Low Voltage, Machines and Electromagnetic Compatibility) and are conform to European and international standards.

Description

LS3..P..-R (plastic casing, 30 mm width) limit switches with latch and manual reset, which are made of fibreglass reinforced UL-V0 thermoplastic material, offer double insulation □ and a degree of protection IP65.
LS3..M..-R (metal casing, 30 mm width) limit switches, which are made of zinc alloy (zamack), have a degree of protection IP66.
Limit switches with latch and manual reset are equipped with 1 N.C. + 1 N.O. or 2 N.C. contact blocks with positive opening operation of the "N.C." contact(s). After actuating the control device and overshooting the latching point, the N.C. safety contact(s) remain in the open position.
Return to the initial operating state takes place by voluntary action on the reset button.

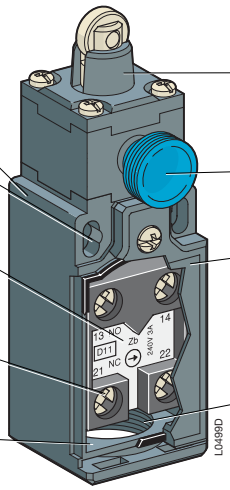
Casing
- 30 mm wide with standardized dimensions corresponding to EN 50047

Casing fixing
- 2 x M4 screws in the top part

Block of 2 contacts
- Contact configuration: 1 N.O. + 1 N.C. or 2 N.C.
- Positive opening operation ⊖
- Snap or dependent action
- The 2 contacts are electrically separated

Connecting terminals
- M3.5 (+,-) posidriv 2 screw (Screw head with captive cable clamp)
- Marking conform to IEC 60947-1, IEC 60947-5-1, EN 50005 and EN 50013 standards

Terminal for protective conductor placed near the cable inlet and marked: ⏚ (LS3..M only)
- M3.5 (+,–) pozidriv 2 screw (Screw head with captive cable clamp)



A variety of operating head options:
- Plain plunger
- Roller plunger
- Roller lever adjustable or not, etc.

Assembly using 4 x ø 3 screws for LS3..P..
Assembly using 4 x M3 screws for LS3..M..

Blue manual reset button

Cover
- Closed using 1 x ø 3 screw for LS3..P..-R
- Closed using 3 x M3 screws for LS3..M..-R

One piece sealing gasket to ensure tightness

Electrical connection:
- 1 (LS30P/M) cable inlet for Pg 13.5 cable gland
- 1 (LS31P/M) cable inlet for Pg 11 cable gland
- 1 (LS32P/M) cable inlet for ISO 16 cable gland
- 1 (LS33P/M) cable inlet for ISO 20 cable gland
- 1 (LS35P) cable inlet by 1/2" plastic adaptor
- 1 (LS35M) cable inlet for 1/2" cable gland

Suitable for conduit connection only with use of adaptor sleeve optionally provided by manufacturer (on request).

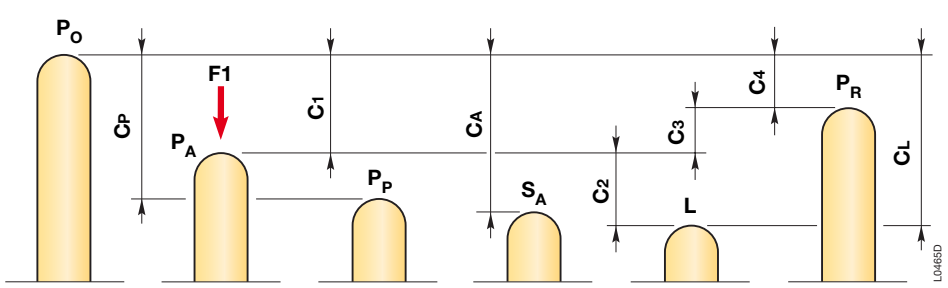
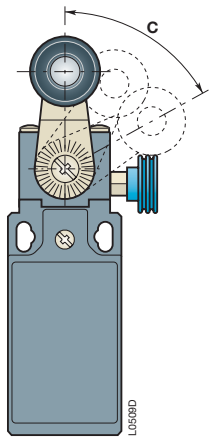
Limit Switches with Latch and Manual Reset

Travel and Operation diagrams





P_O Free position:
position of the switch actuator when no external force is exerted on it.

P_A Operating position:
position of the switch actuator, under the effect of force **F1**, when the contacts leave their initial free position.

P_P Positive opening position:
position of the switch actuator from which positive opening is ensured.

S_A Latching point:
point of no return of the switch actuator beyond which the opened status of the (N.C.) contact(s) is maintained. Unlocking will only occur after deliberate action on the reset button.

L Max. travel position:
maximum acceptable travel position of the switch actuator under the effect of a force **F1**.

P_R Release position:
position of the switch actuator when the contacts return to their initial free position.

C_1 Pre-travel (average travel):
distance between the free position P_O and the operating position P_A.

C_P Positive opening travel:
minimum travel of the switch actuator, from the free position, to ensure positive opening operation of the normally closed contact (N.C.).

C_A Latching travel (average travel):
distance between the free position P_O and the latching point S_A.

C_2 Over-travel (average travel):
distance between the operating position P_A and the max. travel position **L**.

C_L Max. travel (maximum travel):
distance between the free position P_O and the max. travel position **L**.

C_3 Differential travel (C_1-C_4) (average travel):
travel difference of the switch actuator between the operating position P_A and the release position P_R.

C_4 Release travel (average travel):
distance between the release position P_R and the free position P_O.

Diagram for snap action contacts:

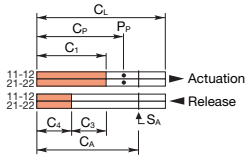


Diagram for non-overlapping slow action contacts:

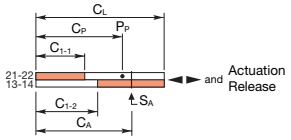

Contacts position

Note: for slow action contacts, $C_3 = 0$, C_{1-1} = pre-travel of contact 21-22, C_{1-2} = pre-travel of contact 13-14.

Foot Switches

IPS Foot Switches with Covers, IPM Mini Foot Switches
Description

Application

Foot switch operated machines such as: shearing machines, folding machines, spinning lathes, machine tools, wrapping machines, riveting presses, etc.

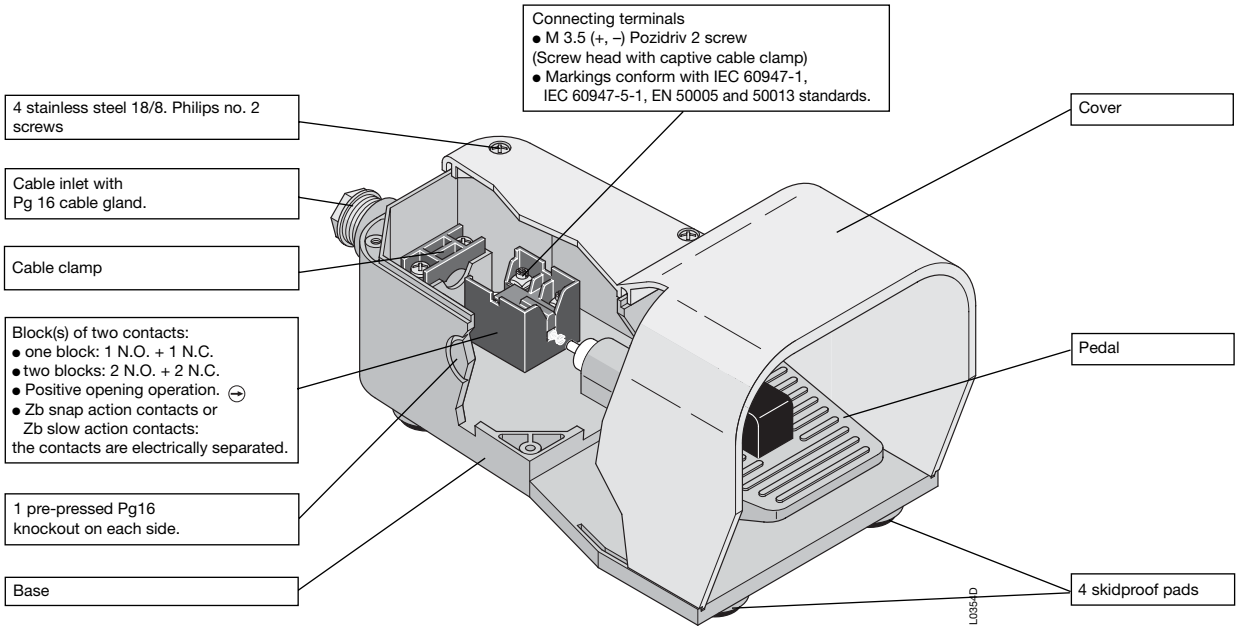
Foot switches with covers come in three operation formats:

- **Free movement:** contact position follows pedal movement: actuated when the pedal is pushed down, released when pedal is in a state of rest.
- **Foot switch locked in neutral position:** same operation as above, after unlocking the pedal with the end of the foot.
- **Foot switch latched in low position:** same operation as free movement, except that a state of rest is obtained only after having unlatched the pedal with the end of the foot.

Description of IPS Foot Switches with Covers

- **Dimensions:** 285 x 140 x 145.
- **Materials:** base, cover and pedal made of shock resistant Bayblend® FR 90 material (alloyed polycarbonate and ABS).
- **Colour choice:** grey base; grey, yellow or red cover.
- **Variations:** grey base, half-red cover. Especially used for emergency stop function.

Note: this emergency stop function must never contain the «locked in neutral position» device.



On request: Foot switches with covers can be assembled on a plate and equipped with a transportation handle. Instead of the handle an emergency stop button can be installed above a tube that allows for connection cable passage. (see the catalogue of separate elements)

Description of IPM Mini Foot Switches

- **Reduced dimensions:** 100 x 75 x 34 mm.
- **Materials:** cover and base made of self-extinguishing ABS.
- **Colour choice:** black or grey base; black, grey, yellow or red cover.
